### LED PUSHBUTTON SWITCHES

Aerospace Optics Inc. introduces a new line of LED pushbutton switches designed for military and non-military avionics use. The VIVISUN® LED lighted pushbutton

switch features solid-state circuitry and innovative electronics that have been developed to solve reliability, sun-

light and night vision readability, power consumption and other concerns that have existed with previous generations of LED switches. The switch offers:

- Voltage-controlled dimming without pulse width modulation
- Operates off of existing cockpit power sources, and can directly replace existing incandescent switches
- Available in nine sunlight readable colors, including white
- Meets MIL-PRF-22885F for sunlight readability and environmental requirements
