Aerospace Optics breaks ground with VIVISUN LOGIC SERIES

FORT WORTH, TEXAS, JULY 1, 2009 – In keeping with its tradition of product innovation, Aerospace Optics has created the VIVISUN LOGIC SERIES, the first switch of its kind based on an integrated logic circuit.

The LOGIC SERIES is an electromechanical switch with multiple operational modes that are controlled by discrete inputs. The LOGIC SERIES has the ability to automatically reset to a safe mode when power is cycled, and it can interface with external sensors to allow for conditional switching or lockout modes.

The most innovative feature of the switch is an integrated, solid-state circuit that allows different poles in the same switch to function as momentary or alternate action, but unlike its competition, it does the job without external relays or holding coils. This simplifies and improves operator interface. The internal circuit also gives the LOGIC SERIES the ability to be locally or remotely set or canceled. Blink has also been added as an integrated performance feature.

Aerospace Optics is one of the world's premier manufacturers of LED pushbutton switches, indicators and programmable displays for avionics, aerospace and defense applications. Located in Fort Worth, Texas, Aerospace Optics is an AS9100:2001 certified supplier. For more information on Aerospace Optics or its complete line of VIVISUN products, visit www.vivisun.com or call 1-888-848-4786.
